**ACCURIDE INTERNATIONAL IS A  
DEVELOPMENT PARTNER AND TIER2  
SUPPLIER OF AUTOMOTIVE MOVEMENT  
SYSTEMS**

## **Audi Q7 Features Accuride Height Adjustable Center Consoles**

Accuride International developed the mechanism for the first sliding armrest introduced in a car. Since then, Accuride's automotive design engineers have continued to develop and enhance the company's expertise in movement solutions and integration.

Now, Accuride has integrated movement technology into the first height-adjustable armrest currently found in the Audi Q7. The armrest, located between the two second-row seats, provides an ergonomic sitting position. It is also stowable when the seats are folded down to maximize the available space.

Based on this success, and feedback from car manufacturers and their system suppliers, Accuride has developed a variety of compact height-adjustable systems, manual as well as electrical. They range from low-end to premium ranges and are modular to meet different requirements according to project specifications.

Accuride works closely with car manufacturers, interior suppliers, as well as with design and engineering specialists to develop unique movement solutions for car interiors that meet the stringent quality requirements of both manufacturers and drivers.
